Variables needed and their explanations for the demonstration data

Protocol	The protocol link of this data: *https://www.cochranelibrary.com/cdsr/doi/10.1002/14651858.CD011535/full*
Unique_id/name	The unique id or name for studies.
treat	The name of the interventions
bias	The risk of bias for each study. This variable is optional.
year_publication	The publication years of each study. This variable is optional.
rPASI90	The number of events for the outcome PASI90 in each arm of each study.
nPASI90	The number of total participants for the outcome PASI90 in each arm of each study.
rSAE	The number of events for the outcome SAE in each arm of each study.
nSAE	The number of total participants for the outcome SAE in each arm of each study.
age/male/weight/pasi_score/bmi	Potential effect modifiers. These are optional to generate boxplots and scatter plots for transitivity checks.
